

Energy and Environment Reporter

The Bismarck Tribune, the newspaper in the capital city of North Dakota, is seeking a full-time reporter to cover energy and the environment.

The successful candidate will cover the nation's No. 2 oil-producing state, which accounts for 12% of U.S. production. The beat also includes coverage of coal, with North Dakota home to the single-largest deposit of lignite in the world. North Dakota also is a leading state for wind energy development and is expected to have its first commercial solar project by 2020.

We're looking for an experienced reporter to cover the energy industry, as well as environmental impacts of development. Bismarck is the center of energy regulation and centrally located to coal country and the Bakken oil patch.

North Dakota has been at the center of many national energy stories, including the Dakota Access protests, an oil refinery planned near Theodore Roosevelt National Park and record volumes of natural gas flaring.

We prefer at least five years of reporting experience, with multi-media skills a plus. The newsroom emphasizes professional development opportunities to help reporters grow.

The Tribune is a member of Lee Enterprises and offers a full benefits package including medical, dental, a generous paid time off program and a 401k plan.
