WHERE RIVERS, AND POLITICS, CHANGE DIRECTIONS

Hosted and Sponsored by Colorado State University

Fort Collins, Colorado

October 9 – 13, 2019

CLIMATE CHANGE

Visit leading-edge atmospheric research centers. Witness impacts from wildfires, drought and species loss. Learn about statewide GHG-reduction, renewable-energy initiatives and other solutions.

ENERGY

The Front Range is a flashpoint for oil and gas activities and anti-fracking activism, as well as a hotbed for wind and solar development.

WATER

It's Colorado's lifeblood, and it's in short supply, inciting urban v. rural, east v. west battles. The Colorado River overflows with stories, as its flows dwindle.

#SEJ2019

FOOD AND AGRICULTURE

Massive CAFOs, regenerative ranching, natural foods entrepreneurship, the marijuana boom's controversial eco track record: Colorado has it all.

ENVIRONMENTAL HEALTH

Lower-income metro communities suffer most acutely from air pollution from vehicles, while country dwellers suffer from oil and gas emissions.
