Carnival Cruise Lines might fuel rule the nation's largest cruise line in what he over air-quality mandate, said Maryland Governor Martin O'Malley's press secretary, Takirra Winfield.

Carnival wanted O'Malley's help in getting the EPA to expedite a review of its waiver from the agency's cleaner-fuel mandate.

The EPA says the requirement, which calls for the use of cleaner-burning fuel on cruise ships, could significantly reduce air pollution not just along the coast but far inland. The cruise industry has warned of potential cuts in cruises and jobs because of higher costs.

Carnival 'picked up the phone right away' after learning that Carnival had told state port officials it was considering ending its weekly cruises out of Baltimore as early as November as a result of the regulation, said its press secretary, Takirra Winfield.

Governor O'Malley said his administration will continue working with the EPA to protect jobs in Maryland.

Carnival, according to O'Malley's help in getting the EPA to expedite a review of its waiver, has come under investigation by the decision. Carnival has emerged whether it schedules cruises from Baltimore next year as a result of the regulation, said Maryland Port Administration spokesman Richard Green.

"If we are at state, the governor is going to do his due job," said Green.

Dodd said that Carnival administration will continue working with the EPA to protect jobs in Maryland.

Female correctional officers in Baltimore

Faith, hard work help Davis realize his dream

Through high school stardom, struggles with the Rangers and now success with the Orioles, slugger is finding himself fearless sluggers and a likely All-Star starter as he leads the majors with 22 home runs.

Growing up in East Texas, Davis was like a puppy with big paws, bowling over everything. But even as he climbed the ranks of the game he loved, he had trouble finding the deeper fulfillment he coveted. He had to stop trying to overpower everything in his life. He had to tone down the perfectionism streak he inherited from his dad, Len, who gave him this work ethic.

"The power? That blunt-force ability to lay wood to a baseball and propel it 400, 450 feet? He had it even when he was a boy. Came from God, as far as he's concerned," said Davis.

Davis realize his dream because of higher costs.

By Ramin Mostaghim and Patrick J. McDonnell

The sprawling lands and waters of the East Coast, home to 80 million people, have long been a focal point for environmental and energy issues. With its heavy industry, heavily populated urban areas and heavily traveled waterways, the region is a source of pollution and a place where businesses and communities have struggled to find solutions.

The Trump administration has been under scrutiny for its handling of environmental and energy issues, including climate change, fuel standards and the use of offshore energy resources. As the US leader in the fight against climate change, the administration has been criticized for its lack of commitment to reducing greenhouse gas emissions.

The White House has been under pressure to make changes to the nation's energy policies, and the administration has been working to develop a plan for the future of the economy.

The US economy has been struggling with high unemployment and low wages, and the administration has been focused on finding solutions to these issues. The US government has also been working to develop a plan for the future of the economy, including its approach to climate change and energy policy.
